Guidance on charging to Superfund sites in emergency response.

https://www.nrt.org/sites/2/files/Suiter_Makris_Policy_Guidance_on_ESF.pdf

Summary

FEMA and EPA reached an agreement in September 1998 which stated that it was FEMA's intent to utilize Stafford Act funds to reimburse EPA for specific emergency response activities related to hazardous materials (hazardous substances, pollutants, contaminants, and oil) under ESF #10, when there is an Emergency or Major Disaster Declaration. In September 1999, interim guidance (link above) for Hurricane Floyd was issued which further clarified the 1998 document.

Activities that EPA will fund :

- EPA will use CERCLA funds to pay for emergency response activities related to all preexisting Superfund sites, that is, sites that have ongoing CERCLA response actions or are currently listed on the National Priorities List (NPL.)
- EPA will use Oil Spill Liability Trust Fund funds to pay for all response activities related to pre-existing Oil Pollution Act removal actions.

Activities that FEMA will fund through Stafford Act :

These activities must be specifically requested by the State and be beyond the State's capability for a Mission Assignment and associated funding to be issued. Decisions will be made in consultation with the ESF #10 representative. Guidance defines the typical response actions that occur following a natural disaster.

Activities that FEMA may fund through Stafford Act :

These are activities, which may occur following a natural disaster. Consultation among the FCO, ESF #10 representative, and the State is critical before a determination is made on funding. Again, these activities must be specifically requested by the State and be beyond the State's

capability before a Mission Assignment and associated funding will be issued.

- Clean-up or removal of hazardous materials or oil contamination in buildings or facilities otherwise eligible for FEMA assistance (ex., public buildings.) An example of a situation where this may occur and should be funded would be decontamination of a subway system following a terrorism incident.
